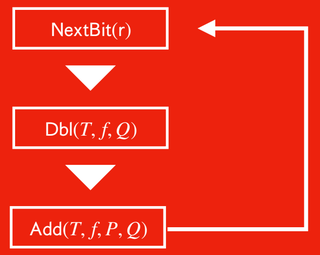
2



Speeding-up general pairings

general notice

Computing pairings fast is quite technical. Better suited for papers than slides

core idea

For $P \in E(\mathbb{F}_p)$ and $Q \in E^t(\mathbb{F}_p)$, don't use curve arithmetic but pairing $e(P, Q)$ to get overlap in orders!

general approach

Instead I describe the general approach, and leave all details out

0 take some literature

1
