Add(T, f, P, Q)

Speeding-up general pairings

### pairing crypto

Choose a "nice" curve *E*, Choose a "nice" prime *p*, to do **pairings** with

Computing e(P, Q) is quite **fast**!

## isogeny crypto

Choose a "nice" curve E,
Choose a "nice" prime p,
to do **isogenies** with

These are mediocre curves, and definitely bad primes, to do pairings with

Computing e(P, Q) seems way too **slow**!

#### core idea

For  $P \in E(\mathbb{F}_p)$  and  $Q \in E^t(\mathbb{F}_p)$ , don't use curve arithmetic but pairing e(P,Q) to get overlap in orders!

# pairing crypto

Choose a "nice" curve E, Choose a "nice" prime p, to do **pairings** with

Computing e(P, Q) is quite **fast**!

### isogeny crypto
