

is quite **fast**!

isogeny crypto

Choose a "nice" curve E,
Choose a "nice" prime p,
to do **isogenies** with

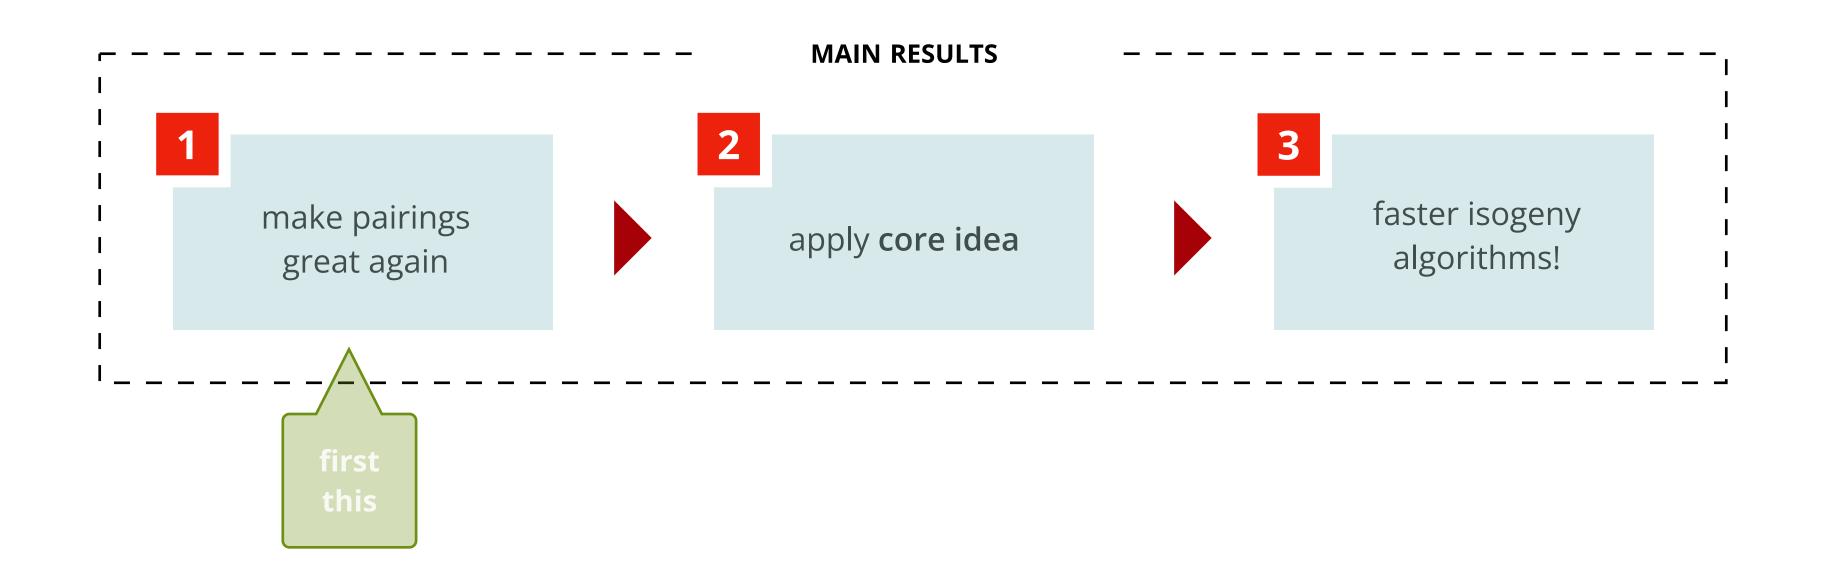

These are mediocre curves, and definitely bad primes, to do **pairings** with

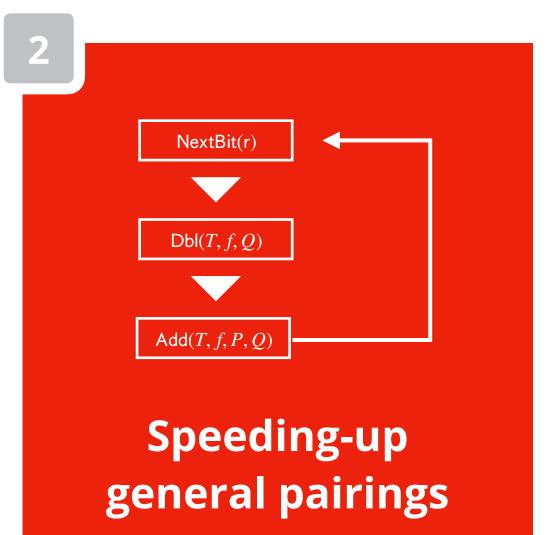

Computing e(P, Q) seems way too **slow**!

core idea

For $P \in E(\mathbb{F}_p)$ and $Q \in E^t(\mathbb{F}_p)$, don't use curve arithmetic but pairing e(P,Q) to get overlap in orders!
