Question

given E and E', can we find
an isogeny $\varphi : E \to E''$?

Question

given E and E', can we find
an isogeny $\varphi : E \to E'$?

easy

easy to verify that
some isogeny exists,
e.g. that E and E'
are **isogenous**

hard

actually giving an
isogeny $\varphi : E \to E'$
or some way to
compute this
